

# SILVER ANNIVERSARY - XT

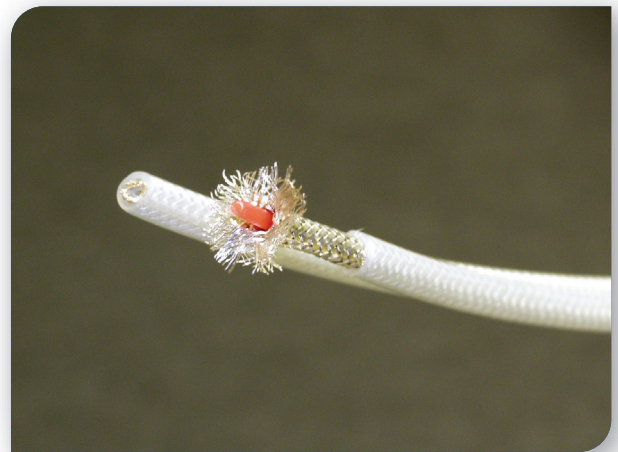

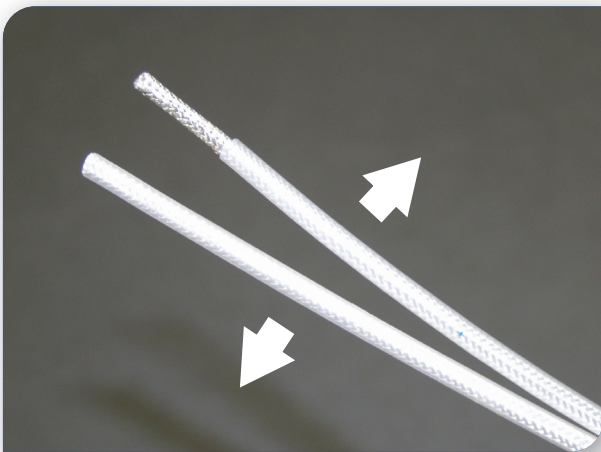

WITH X-TUBE™ TECHNOLOGY

## TERMINATION GUIDE

The New QED Silver Anniversary XT has been designed to encompass X-TUBE™ technology while offering the user an easier method of termination. This includes the use of an easy to strip outer jacket and compressible colour coded Teflon aircore dielectrics.

- 1 Lightly score in between the positive (+) and negative (-) conductors with a sharp blade on both sides of the cable.

- 2 After this scoring process the positive and negative conductors will separate easily preventing any damage to the outer jacket. There is no need to remove the coloured inner spacer, the AirLoc plug may be crimped directly onto the cable.
